Nervousnet: A CERN for Society

Follow **FuturICT** on

Scientific progress has been largely driven by data and experimentation. That's the basis to build theories on.

So far, however, we didn't have experimental approaches for socio-economic systems that were comparable to physics, chemistry, or biology.

This is now changing!

Can We Build a CERN for Society?

CERN deletes 99.9% of measurement data immediately

Today's Universal Tool

We Can Connect Smartphones to Build a Global Measurement System

Photo: apple iOS and android phones

But We Need A System We Can Trust ...

Trust Requires Transparency

A person in a white shirt and tie is holding a white sign in front of their face. The sign has handwritten text in black ink. The person's face is blurred in the background.

Transparency
is The New
Green.

We Can Build A Planetary Nervous System as A Citizen Web

What the Planetary Nervous System Can Do for Us

Areas of application include

- (1) the **real-time measurement** of the state of our techno-socio-economic-environmental systems,
- (2) greater **awareness** of chances and risks to support everyone's decision-making,
- (3) the development of a **Global Systems Science** to manage our world more successfully,
- (4) the creation of **self-organizing systems**, and
- (5) the support of **collective intelligence**.

Paradigm Shift in Disaster Response Management: Bottom-Up Participation

“Do this!”

In a quickly changing world, politics and business becomes increasingly similar to disaster response management!

“I can do this!”

Better Performance of Complex Systems by More Autonomy + Suitable Interaction Rules

If complex dynamical systems vary a lot, are hard to predict and cannot be optimized in real-time, distributed control can outperform top-down control attempts by flexibly adapting to local conditions and needs.

(Windt, Böse, Philipp, 2006)

Exponential vs. Factorial Growth – Implications for the Governance of Complex Systems

Complexity Science
allows us to use the
hidden forces behind
self-organization

We Can Let Socio-Economic
Systems Work for Us!

A photograph of two martial artists in a sparring routine. The artist in the white gi is performing a high kick, with his leg extended horizontally. The artist in the blue gi is in a low, defensive stance, with his hands raised to block the kick. The background shows a blurred audience and a red banner with some text. The text "Asian Martial Arts" is overlaid in red at the top, and "Use the forces to your own advantage!" is overlaid in white at the bottom.

Asian Martial Arts

Use the forces to your own advantage!

Complexity science
offers new
approaches to
address long-
standing problems

Wisdom of
crowds
requires
independent
exploration
and then
integration

A way of electing Hong Kong's next Chief Executive must be found in time for legislation to be enacted by the 2017 election. This must meet China's promise of Universal Suffrage and satisfy the majority of HK citizens. It is also limited by the Basic Law (mini-constitution) and 'interpretations' by the Select Committee of the National Peoples Council (SCNPC)

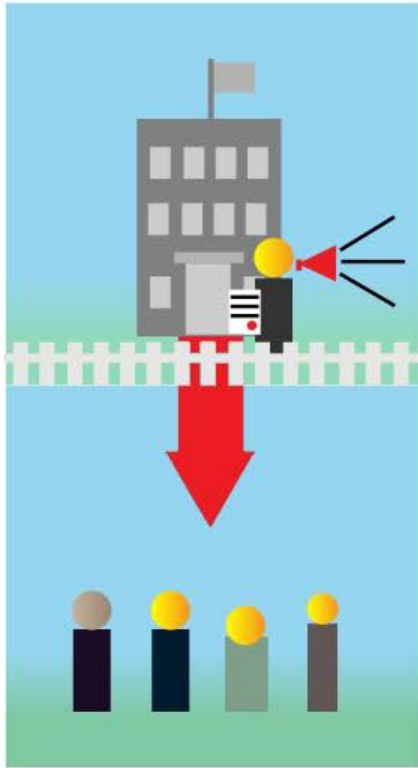

Argument Maps

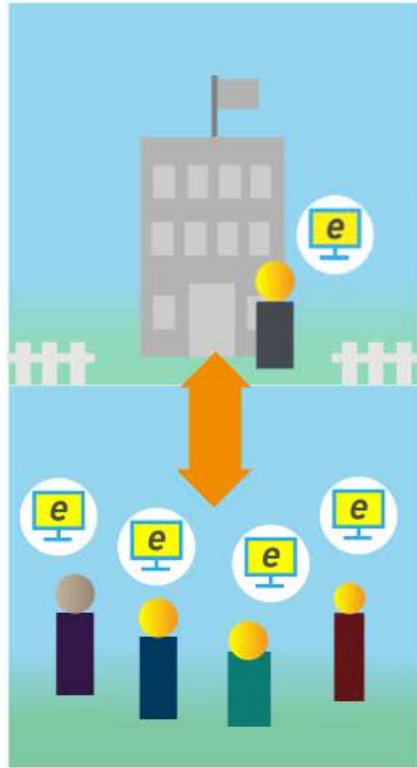

We need to build suitable platforms to collect, share and integrate ideas

New Information and Communication Technologies Allow to Improve Governance

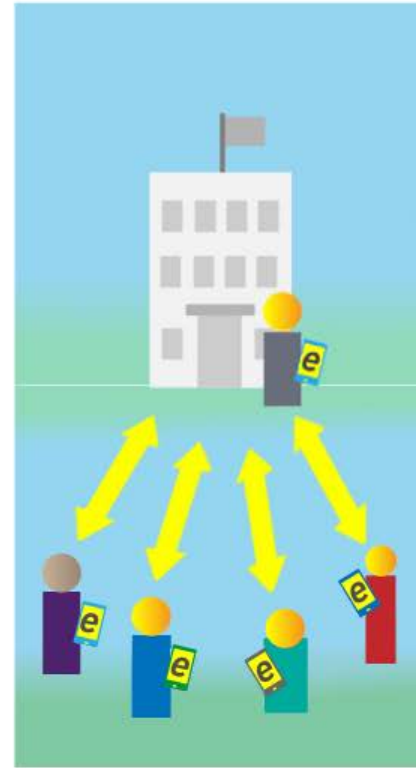

Government 1.0

Government 2.0

Government 3.0

Government 4.0

IMAGINECHINA/CORBIS

Many choices that people consider their own are already determined by algorithms.

Build digital democracy

Open sharing of data that are collected with smart devices would empower citizens and create jobs, say **Dirk Helbing** and **Evangelos Pournaras**.

Summary: Information Technologies for a Smart Digital Society

1. Planetary Nervous System
2. Measurement of Externalities
3. Multi-Dimensional Feedbacks
4. Digital Assistants
5. Collective Intelligence

Can all be based on a distributed approach!

The countries implementing these new organizational principles first will be leading

A Networked and Well Coordinated System of Largely Autonomous Systems

How Finally Everything Comes Together: Science, Politics, Business, and Society

- Massively increased **efficiency**
- **Self-organizing**, self-improving systems
- **Democratic** principle of participation
- Individual **autonomy** of decision-making
- **Free entrepreneurial activity** and markets
- Consideration of **externalities**
- **Other-regarding** and fair
- Improving **environmental issues**
- Supporting **cooperation**, reducing conflict

Let's Do This Together!
